QUICK FIX GUIDE 4

IS YOUR CANISTER FILTER NOT STARTING?

Troubleshoot your canister filter with these 5 quick checks.

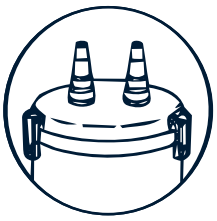

1

CHECK THE POWER SUPPLY

Ensure the filter is plugged in and switched on. Check the power outlet is working and try another device.

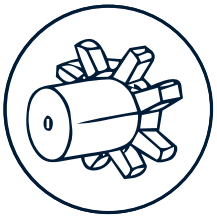

2

CHECK THE PRIMER

Make sure the primer (if fitted) is fully open. Pump it several times to remove any trapped air and start the flow.

3

CHECK THE IMPELLER

Remove and inspect the impeller for debris, blockages or wear. Clean it thoroughly and refit correctly.

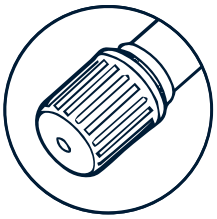

4

CHECK THE FILTER MEDIA

Ensure the media is clean and not clogged. Rinse or replace if necessary and make sure it's not packed too tightly.

5

CHECK THE INLET STRAINER

Inspect the inlet strainer for debris, algae or blockages that may be preventing water from entering the filter.
