QUICK FIX GUIDE 15

IS YOUR HANG-ON FILTER LEAKING WATER?

Troubleshoot your hang-on filter with these 5 quick checks.

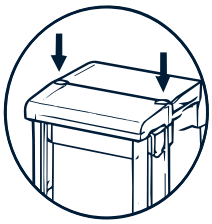

1

CHECK THE POSITION

Ensure the filter is hanging correctly on the tank and is fully seated. If it's not level, water can leak from the sides or back.

2

CHECK THE LID

Make sure the lid is fitted correctly and isn't damaged. A loose or warped lid can allow water to leak from the top.

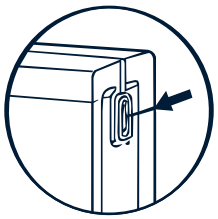

3

CHECK THE MEDIA

Ensure the media is not overfilled or incorrectly fitted. Media that's too high can prevent the lid from closing properly and cause leaks.

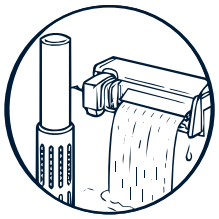

4

CHECK THE SEALS

Inspect the rubber seals and gaskets for wear, damage or debris. Clean them and refit properly.

5

CHECK THE INLET & OUTLET

Make sure the intake and spillway are securely connected and not damaged. Cracks or loose fittings can cause water to leak.
